

# Project Showcase Presentation

## & Technical Questions

The next stage of our interview process is the **Project Showcase & Technical Questions**.

### What to Expect

- **Duration:** 60 minutes total
  - 5 minutes: Introductions & expectations
    - 20 minutes: Your project presentation (slides required). **Make sure your presentation does not go over this. Test run your presentation at home.**
    - 25 minutes: Technical deep-dive and Q&A
    - 10 minutes for your questions. We want to make sure you also have a chance to learn about the team and the projects we do.

### What are we looking for?

- We are trying to learn about YOUR skills.
  - I used all caps (apologies for that) to point to you what to focus on in the presentation (hope it helps)
- Please focus more on your parts of the project, what you have delivered, rather than a long overview of the project.
  - Often the project has multiple stakeholders and different teams responsible for different parts. Focus on your portion. Make sure the majority of the presentation is about your skills, your deliverables, and your solutions.
- We are looking for someone who can get to the point, clearly articulate what the project was about, and clearly show what he/she delivered.

### Presentation Guidelines

#### Project Selection

- **Choose a project you have personally contributed to in one or more of the following areas:**
  - AI Engineering (e.g., ML/AI system design, agent-based solutions, end-to-end ML pipelines)
  - Software Engineering (e.g., robust, scalable backend, cloud, MLOps, or automation)
  - System Engineering (e.g., orchestration, cloud deployment, infrastructure)
  - Computer Vision (e.g., model development, data pipelines, production deployments)

- The project should be sufficiently complex to discuss both your technical decisions and system-level thinking.
- If you are not sure what to present, look at the JD and what we do and try to build, and see if you have anything that could connect to this.
- If possible, select a project that allows you to demonstrate *end-to-end* hands-on ownership or a significant leadership/contribution role.
- This is a hands-on coding role so focus more on the coding elements rather than the leadership (managerial) elements.

## Slides

- Please prepare a slide deck (**8–15 slides recommended given you have only 20 minutes to present**) that covers these potential elements (you don't have to include all of them; truly depends on your project):
  1. **A brief project overview and your role**
  2. **Business or technical problem addressed**
  3. **System/architecture diagram**
  4. **Key technical challenges and solutions**
    - [Optional] ML/CV methods, agent architectures, or tools used
    - [Optional] Data pipeline, evaluation, and metrics
    - [Optional] Deployment/productionisation strategies
    - [Optional] CI/CD, testing, and monitoring approaches
  5. **Lessons learned or trade-offs**
  6. [Optional] *How you would improve/extend the project with new technologies (e.g., agent frameworks, orchestration tools, vector DBs, etc.)*
- **Please keep your presentation focused:** avoid confidential or proprietary details, but ensure technical depth.
- **Please focus more on your individual contributions and avoid the “we” slides which include contributions from multiple teams.**
  1. **Aim for the depth of your contributions rather than the breadth of the team's solution.**
- Please add any additional (supporting) slides to the Appendix section

## Q&A Session

- After your presentation, the panel will ask in-depth technical questions related to:
  - Your project and decisions made
  - Adjacent technologies, practices, and methods as outlined in your CV

- How you would adapt or extend your solution if new requirements or technologies were introduced
- **Be prepared to discuss trade-offs, reasoning, issue handling, & lessons learned.**
- We're looking for both depth (how well you understand your project) and breadth (how you'd approach related challenges).

## **Practical Details**

- **Bring your slides** (PDF or PowerPoint format preferred; you may share your screen).
  - **Email your PDF slides to the recruiter at least 24h before the presentation so we have a chance to review them.**
- If presenting a group project, be clear about your personal contribution and decision-making authority.
- If you have any questions about the format or scope, let us know ahead of time.
